

PRE-SEED PITCH / KIU COMMUTER INTELLIGENCE

Honest Bus #3 decisions before students leave home.

A lightweight mobile web app that turns unreliable arrival information and fragmented peer reports into structured, confidence-aware commute decisions.

5-12h

LOST PER WEEK

Reported by Bus #3 commuters

12/12

INTERVIEWS CONFIRMED PAIN

Discovery synthesis

60k GEL

RAISE

Reliability + campus expansion

THE COMMUTE TAX

Official tracking creates false confidence at the exact moment students need truth.

WEEKLY TIME LOSS

5-12h

Students compensate for misleading arrivals with extreme buffers, taxis, and lost sleep.

1.5-3h

EARLY BUFFERS

Leaving far earlier than needed

6-10 GEL

TAXI FALLBACK

Spend when uncertainty breaks the plan

GPA

ACADEMIC IMPACT

Missed quizzes and late arrivals

Sleep

QUALITY-OF-LIFE IMPACT

Morning stress becomes routine

"Just tell me the truth. Not three minutes when you mean twenty. I do not need it perfect. I need it honest."

P06 Nino, discovery synthesis

DECISION LAYER

A pre-departure answer: leave, wait, or choose a fallback.

BEHAVIOR SHIFT ALREADY HAPPENED

Students already moved from official timetables to peer-verified status sharing.

1

Official tools

Arrival estimates look precise, but students report repeated trust breakdowns.

2

Peer coordination

Students ask each other what is actually happening at stops in real time.

3

Structured decisions

Bandersnatch turns fragmented reports into a reusable status and confidence layer.

WHY THIS CAN LAUNCH NOW

No city GPS integration is required to prove the habit. Partner/GPS integration can be added after the peer-status loop validates retention.

The morning commute question becomes one phone flow.

DEMO STEP 1

Select a Bus #3 stop and direction.

DEMO STEP 2

Check route status and confidence context.

DEMO STEP 3

Use route context to decide whether to leave.

DEMO STEP 4

Submit feedback/reporting to improve trust.

PITCH ROOM INSTRUCTION

Show the deployed product live on a real phone during the pitch.

WEDGE-TO-PLATFORM EXPANSION

Start with the validated route, then expand to campus commuter cohorts.

SOM - KIU BUS #3 COMMUTERS

\$3.2k + sponsorship 400 commuters x \$1/month x 8 academic months.

SAM - GEORGIAN CAMPUS ROUTES

\$64k 20 routes x 400 students x \$1 x 8 months.

TAM - ROUTE-CONSTRAINED CAMPUSES

\$400k 100 commuter cohorts x 500 students x \$1 x 8 months.

INVESTOR FRAMING

The initial market is intentionally narrow. The thesis is proving a repeatable commuter trust loop, then layering sponsorship and institutional analytics.

EARLY BEHAVIOR VALIDATION

Users are completing the core status-check behavior.

20

OBSERVED USERS

Rapid test, May 19-21

15

CHECKED STATUS

75% completed the key action

12

BOARDED AFTER CHECK

80% of status-check users

21

30-DAY ACTIVE USERS

Firebase, May 21

20

7-DAY ACTIVE USERS

Firebase, May 21

2

SIGNUPS RECORDED

Analytics undercount disclosed

May 20

SDK FIX

Instrumentation caveat isolated

ACQUIRE USERS WHERE THE PAIN HAPPENS

QR flyers and student groups make the first 500 users cheap to test.

Primary channel: Bus Stop QR flyers

Secondary: Telegram / WhatsApp groups

MVP

Free to maximize route density and habit formation.

STUDENT PREMIUM

\$1/month after validation for advanced commute support.

UNIVERSITY SPONSOR

About 500 GEL per semester for institutional support.

\$0.11

QR-FLYER CAC

Validated from \$5.60 campaign cost and 50 conservative signups.

40:1

LTV:CAC

Based on conservative \$2.00 projected LTV and \$0.05 blended CAC.

~\$52.69

FLYER-ONLY COST TO 500

Starting from 21 active users; acquire 479 more.

POSITIONING

Bandersnatch wins where commuters decide: before leaving.

WHY COMPETITORS DO NOT SOLVE IT

- Official tools have coverage, but lose trust through misleading precision.
- Peer chats have freshness, but no structure, memory, or confidence layer.
- Taxis solve reliability but not affordability for everyday commuting.
- Bandersnatch focuses on the actual job: decide before leaving.

MOAT 1

Personalized stop and route context.

MOAT 2

Peer reports improve route reliability.

MOAT 3

Departure recommendation loop.

FUNDING PLAN

60,000 GEL to reach institutional readiness by March 2027.

INVESTMENT ASK

60k GEL

At a 240,000 GEL pre-money valuation, implying 20% dilution.
